

Project Progress Evaluation

EE7802/EC7802 Undergraduate Project

Dr. Nadeesha Sandamali

Evaluation Schedule

Evaluation/Activity	Date		Tentative date
	Semester	Week	EIE
Selection of the project	7	1	10.11.2025
Submission of project proposal report for supervisor's comments		4	16.01.2026
Submission of project proposal report		5	19.01.2026
Project proposal presentation and VIVA		6	22.01.2026
Submission of project progress report	8	2	11.05.2026
Project Progress presentations and VIVA		3	14.05.2026 
Submission of draft of the final report for supervisor's comments		14	20.07.2026
Submission of Final report		15	27.07.2026
Final presentation and VIVA		During end exam	
Final Demonstration		During end exam	

Progress Evaluation

- Group Presentation (5 marks)
 - 12 minutes per group
- Individual VIVA (10 marks)
 - 8 minutes per student
- Contribution (5 marks)

Introduction (1 minute):

- Briefly introduce the project and its objectives.

Progress Overview (2 minutes):

- Summarize the work completed since the proposal evaluation.
- Highlight major milestones achieved.

Detailed Progress (6 minutes)

- Explain methodologies and tools used.
- Show data, prototypes, models, or any tangible progress made.

Challenges and Solutions (1 minute)

- Describe any significant obstacles encountered.
- Explain how these challenges were addressed or are being addressed.

Next Steps (1 minute)

- Outline the upcoming tasks and milestones.
- Provide a timeline for future activities.

Conclusion (1 minute)

- Recap the key points covered in the presentation.

Presentation [5 Marks]				
	Weak [0-39] (Grade: E)	Satisfactory [40-59] (Grade: C- to B-)	Good [60-84] (Grade: B to A)	Excellent [85-100] (Grade: A+)
a) Content [30%]	- Adopted methodology is inappropriate, many mistakes are made in the methodology. - Presented no preliminary results.	- Adopted methodology is appropriate but some mistakes are made in the use of the methodology. - Presented some preliminary results with major errors.	- Adopted methodology is appropriate. Some of the methods may not be the best choice or minor details are incorrect. - Presented preliminary results with minor errors.	- Adopted methodology is correct and well implemented. - Presented preliminary results with no errors.
b) Current Status [30%]	Project is not posed to achieve its objectives within the given time frame i.e. remaining tasks are not within the group's capacity.	Project is posed satisfactorily to achieve its objectives within the given time frame. <u>remaining</u> tasks are within the group's capacity.	Project is posed to achieve its objectives within the given time frame i.e. remaining tasks are within the group's capacity.	Project is well posed to achieve its objectives within the given time frame i.e. remaining tasks are within the group's capacity.
c) Organization [25%]	<u>Information</u> presented is not in sequence; hard to follow.	Most of <u>information</u> presented in sequence.	Information presented in logical sequence; easy to follow.	Information presented as an interesting story in <u>logical</u> sequence, easy to follow.
d) Effective Communication [25%]	<u>Student is</u> not prepared. - Lose audience attention frequently. - Delivered content is not understood.	<u>Student is</u> reasonably prepared. - Keeps audience attention. - Delivered content is generally understood.	<u>Student is</u> prepared. - Keeps audience attention. - Delivered content is understood.	<u>Student is</u> well prepared. - Keeps audience attention throughout. - Delivered content is well understood.

Viva [10 Marks]				
	Weak [0-39] (Grade: E)	Satisfactory [40-59] (Grade: C- to B-)	Good [60-84] (Grade: B to A)	Excellent [85-100] (Grade: A+)
Knowledge [70%]	<u>Student does</u> not have <u>clear</u> understanding of the methodology. - Knowledge gained due to project work is weak, No understanding about the future course of the project.	<u>Student has</u> satisfactory understanding of the methodology. - Knowledge gained due to project work is satisfactory, has some understanding about the future course of the project.	<u>Student has good</u> understanding of the methodology. - Knowledge gained due to project work is good, has <u>good</u> understanding about the future course of the project.	<u>Student has clear</u> understanding of the methodology. - Knowledge gained due to project work is excellent, has very good understanding about the future course of the project, including potential challenges.
Preliminary results [30%]	No idea of the expected results.	<u>Student</u> cannot justify the major errors in the results.	<u>Student</u> can justify the minor errors in the results and <u>has idea</u> about how those errors can be solved.	Student has full understanding of the preliminary results; answers all questions, defends arguments well, <u>presented</u> accurate and logical facts with supporting examples/proof.

- The contribution and teamwork mark is given by the supervisor.

Contribution and Teamwork [5 Marks]				
	Weak [0-39] (Grade: E)	Satisfactory [40-59] (Grade: C- to B-)	Good [60-84] (Grade: B to A)	Excellent [85-100] (Grade: A+)
a) Participation in weekly meetings and active engagement in discussions [30%]	▪ Weak engagement in both weekly meetings and group discussions.	▪ Satisfactory participation in weekly meetings, although involvement in group discussions is not particularly active. ▪ Lack of creative ideas, methods to solve challenges in the project.	▪ Actively engage in weekly meetings by contributing impactful creative ideas and innovative methods to address the project's challenges.	▪ Exemplary engagement in weekly meetings, displaying high levels of activity and enthusiasm during group discussions. ▪ Showcases a remarkable ability to generate creative and innovative ideas for effectively tackling the project's challenges.
b) Amount of work carried out as an individual [40%]	▪ Minimal contribution to the project's success.	▪ Adequate contribution towards the project's success.	▪ Contributes effectively, completes assigned tasks, and actively participates.	▪ Takes initiative, goes beyond assigned tasks, and consistently adds value to the project objectives.
c) Teamwork [30%]	▪ Works independently without engaging or supporting others.	▪ Collaborates at times but struggles to work cohesively within the team.	▪ Collaborates well, assists, and seeks input from teammates.	▪ Fosters a collaborative environment, encourages diverse perspectives, and promotes a cohesive team spirit.

Engineering Research Report Writing

Report Components

1. Cover Page
Title, Project Members, Supervisor, Co-supervisor
2. Abstract
Summary of the project: emphasize novelty, contribution, and significance of results
3. Introduction
Problem Background, Problem statement, Research objectives and Scope, Literature Review, and Report outline
4. Background
Background technologies/ methods used in the project
5. Methodology and Implementation
How to solve the problem, Methods (How tools are used), Project Plan, and expected outcome || Implementation details of the prototype system
6. Testing/ Experimentation/ Validation/ Verification
Experimental setup, Experiments, and their results, results comparison
7. Discussion
Overall insights into the project and its validity
8. Acknowledgement
9. Conclusion and Future Work
Achievements of the project and their significance to the research community/industry....etc.
10. Bibliography
11. Appendix
Codes, links to coding repositories, ethical reviews, diagrams, sketches...etc.

Background

- Introduce the background technologies around the topic
- This section should be similar to a tutorial where the authors should focus on the readers' perspective in understanding the report
- But only a limited amount of content should be presented
- This section should be well-organized and not too long
- Do not focus on conducted research when writing; only attempt explain the concept

Methodology

- This section gives details of the Research Design, including the basic theory, the numerical methods, and the method of analysis used to establish credibility for the research results. Sufficient detail should be provided so that others can reproduce and evaluate the work.
- Research Method and Hypothesis: If possible, try to align the methodology with the research objectives.
- Rationale: Walk the reader through your research project and justify the decisions you made scientifically (i.e., selection of software tools, hardware components, specific algorithm....etc.).
- Experimental Details: Sample size, sampling method,...etc.
- Data collection and storage practices should be clearly specified. Employed tools, data validation...etc. Data Analysis method??
- The model you use for the research should be introduced.
- A flow chart/(s) can be used if necessary.

Implementation

- All the implementation details should be specified here. Start by introducing the requirements for implementation/prototyping.
- Introduce and explain the system architecture. Use figures and diagrams.
- Describe the underlying technological environment/laboratory facilities.
- Walk through the step-by-step process to implementation: coding, configuration, and integrating proposed methods/algorithms to this.
- Provide a short introduction to the testing chapter by emphasizing the key performance indicators of the implementation.

Testing/ Performance Evaluation/ Validation/ Verification

- Clearly define the KPIs, metrics/parameters, and thresholds/benchmarks expected to measure this research's performance.
- Describe the **experimental setup**: environment, configurations, tools,...etc.
- State the experiments/ test cases and clearly explain their significance.
- Present the results in terms of illustrations (graphs) or tables.
- Comparison with the state-of-the-art results is very important.
- Validation/Verification: Theoretical/ Simulations/ Emulations

Discussion

- Highlight the novel/important aspects of your methodology and the implementation that makes it unique from other state-of-the-art projects
- Present the summary of the results/final observations
- Justify that you have achieved the research objectives proposed in the proposal
- If possible, simulate a scenario that your results can impact a real-world application in the long run
- Emphasize the limitations and drawbacks of your proposed methods

Conclusion

- Should be different from the abstract
- Do not put the abstract to ChatGPT
- Presents a short summary
- Divulge the achievement of proposed objectives and scope
- Emphasize the main insights of the research
- Present the impact this research can have on the industry/research community

Future Work:

- State how you are going to rectify the limitations of this research.
- Specify several future directions that the results of this research can progress to....

Ethical Review Approval

- Ethical Review Procedure

- Title
- Group Members
- Short Background
- Problem Statement
- Expected Methodology
- Data Collection Method and Storage Policy
- Involvement of Human or Animal Subjects
- If so, detailed experimental scenarios

Justify with Evidence
or Reformulate
Methodology

Include a 2-page justification of your project's ethical impact with respect to your human/non-human experimental subjects in the appendix.

Other Ethical Considerations

- Plagiarism
 - Report should present less than 25% similarity score
 - Should extend to the group level.
 - The roles and responsibilities should be well defined and stated within the group.
- IP Rights
 - Familiar with the University IP Policy.
 - If you really have something novel, be diligent and apply for a patent...

References/Bibliography

- List of all cited publications should be listed in accordance with the IEEE Method (Follow the format in IEEE publications).
- Always use better references from impacted/indexed journals, books, high-end conferences....etc.
- Avoid websites as much as you can.
- Include a substantial amount of references (at least 50 recommended)
- Check whether all the references are cited in the report
